Work Experience

CSG International

Software Developer Engineer II

Jakarta
April 2026 - Present

CSG is a global provider of customer experience, billing, and payment solutions for the telecom industry.

- Pioneered AI integration at company by building AI Email Interpreter in Java with LangChain on self-hosted Ollama (qwen3-8b), converting raw multilingual client emails into structured order-status-update payloads with few-shot prompting and confidence-thresholded human-in-the-loop fallback; delivered the PoC in 3 days for a client hackathon and showcased at MWC Barcelona 2026 as the flagship order-to-inbox capability.
- Won 2nd place in internal AI competition with an AI-Assisted API Transformation engine that converts natural-language instructions into transformation scripts, substantially reducing manual API mapping effort for customer onboarding.
- Delivered AI Analytics PoC exposing the production database to business users via an MCP-backed conversational interface, enabling self-service exploration without writing SQL.
- Lead developer for Banking & Financial Solutions (BFS), driving 10+ international demos including Sibos, owning the demo environment and acting as first-line on-call; shipped supporting AI tooling (a PDF financial-statement extractor and an MCP server for API orchestration) that accelerated demo turnaround.

Software Developer Engineer I

January 2025 - April 2026

- Earned company TMForum DTW 2025 award by architecting an engine for intent-driven network API transformations as MVP of a Catalyst project in collaboration with Ericsson.
- Achieved zero transaction failures by implementing end-to-end recovery with idempotency, process-engine auto-retry, and enhanced internal error handling, ensuring 100% transaction reliability for critical business operations.

Paper.id

Software Engineer

Jakarta
November 2023 - December 2024

Paper.id is a platform providing invoicing, payment, and financing solutions for businesses.

- Accelerated message template creation from hours to under a minute by integrating third-party SMS and WhatsApp broadcast services with concurrent Goroutines processing.
- Architected a unified payment engine that handles diverse bank behaviors and merchant-specific requirements for QRIS, direct transfer, virtual account, and cross-border remittance flows compliant with Indonesia's Central Bank standards, achieving a 99% transaction success rate and contributing 4 billion IDR TPV in a month.
- Enhanced system robustness with dynamic table partitioning and automated transaction reconciliation over RabbitMQ scheduling and async callbacks, improving query performance by 20% and enabling instant reconciliation reports.

Suitmedia

Software Engineer Intern

Bandung
May 2023 - September 2023

- Built a Laravel-based CMS for a client with 35 dynamic menus and 50 API endpoints from Figma prototypes, redesigning database schemas and ETL flows to improve query performance by 30%.

Synpulse

Software Engineer Intern

Jakarta
October 2022 - December 2022

- Supported a Banking Client's Avaloq core-banking migration by authoring 20 system specifications and automating Excel-to-Oracle reconciliation scripts that cut report processing from 15 minutes to instant.

Education

Institut Teknologi Bandung

Bachelor of Engineering in Informatics

August 2020 - October 2024
CGPA: 3.76/4.00 (Cumlaude)

Technical Skills

- Programming Languages: Java, Golang, PHP, Python, JavaScript, Shell Scripting
- Frameworks & Libraries: Laravel, React, ViteJS, NodeJS, Fastify, JAX-WS
- Databases: PostgreSQL, MySQL, ArangoDB, Oracle Database
- Tools & Infrastructure: RabbitMQ, Kafka, OpenTelemetry, Vault, Consul, Docker, Jenkins, Google Cloud Platform, AWS
- AI / ML: LangChain, Ollama, OpenRouter, Llama 2, Qwen, Model Context Protocol (MCP), Prompt Engineering, LLM Evaluation
